

Application site, built for HoneyBook in your design language:

<https://bar-for-honeybook.vercel.app> · every project below is clickable there

Full-stack builder who ships AI and agentic products from idea to production: LLM apps, MCP tooling, and the systems and DevOps around them. Open-source proof on npm and external validation on Temporal's Code Exchange. Day job as the primary engineer of an early-stage SaaS, so building product that independent businesses run on is home ground.

Experience

Software Developer · Joomsy

05/2025 – present

Primary engineer at a five-person early-stage SaaS startup: full-stack product development plus the DevOps that runs it, design to deploy.

Customer Support Engineer · Wochit

10/2021 – present

Technical support for a cloud video editor at scale: reproduce, debug and resolve real users' rendering and workflow issues, and turn the feedback into product improvements with the development teams.

Selected Projects

MDP: Markdown to document and deck compiler on npm, built for AI agents to write into; ships with an MCP server and Claude Code and Codex plugins. barmoshe.github.io/mdp

Cross-language orchestration: one Temporal workflow over Go, Python and TypeScript workers; featured on Temporal's Code Exchange. temporal.io/code-exchange

Entailer: logic-validity linter for prose and specs: an LLM-in-the-loop translator formalizes claims, a deterministic core checks them. On npm. barmoshe.github.io/entailer

Catalogue Orchestrator: local-first AI video pipeline: RAG over a clip catalogue plans an edit, a deterministic ffmpeg compiler renders it. barmoshe.github.io/catalogue-orchestrator

Apartment Hunter: real-estate decision tool with side-by-side comparison, tax brackets and a full mortgage calculator; product-grade UI, shipped solo. apartment-hunter-one.vercel.app

Education

B.Sc. Computer Science

2020 – 2023

Afeka College of Engineering. Low-level assembly to .NET, operating systems, data structures, algorithms.

DevOps Workshop · Wix

Hands-on Amazon EKS, Kubernetes, Terraform, microservices.

Full-Stack Bootcamp · Coding Academy

Intensive 16-session course: Node.js, React, MongoDB.

Skills

AI: LLM apps, MCP servers, Claude Code and Codex plugins, agents and evals, prompt engineering

Web: React, Next.js, Node.js, REST APIs, HTML/CSS

DevOps: AWS, Docker, Kubernetes, Terraform, CI/CD

Languages: TypeScript, JavaScript, Python, Go, C#
